# Activity Report for Cloudways Divi Custom Child Theme DigitalGroove.com.au

## Summary

Road testing WPMU DEV.

## 🔌 Updates

It's critical to keep WordPress, along with the plugins and themes that you are using, up to date.

Every time we send you this report we check the status of these for you, and let you know what updates we've performed since your last report.

Should you wish to discuss any of these updates, please get in touch with us.

### WordPress Core

✔ WordPress is at the latest version.

### Plugins & Themes

⚠ 5 plugins or themes are available to update.

Update	New Version	Released
 Akismet Anti-Spam	4.0.3	
 Twenty Fifteen	1.9	
 Twenty Seventeen	1.5	
 Twenty Sixteen	1.4	
 Divi	3.4.1	

## Security

### Security Tweaks

Security tweaks help secure your website from harmful bots and attackers.

 All security tweaks are resolved.

We are constantly monitoring your site for security improvements we can make, malicious files that might have been inserted by hacking and any other security concerns we can find.

We also check whether your site has been blacklisted at all, as this can indicate security problems.

In addition to this we log all significant aspects of your sites activity so that we can examine suspicious activity, we can provide you these reports in more detail on request.

### File Scanning

We run regular code checks to look for vulnerable, harmful, and malicious code across your entire website.

 Your website has 1 scanning issues that need attention.

Item	Issue
 wp-salt.php	Unknown file in WordPress core

### Blacklist Monitor

We're checking Google's blacklist every 6 hours to see if this site is malware free.

 Your domain is currently clean.

## IP Lockouts

We are automatically protecting your login area and files from hackers and bots.

✔ There have been no lockouts in the last reporting period.

**Last Lockout**

Never

**Login Lockouts**

0

**404 Lockouts**

0

## Audit Logging

Here is a summary of events that happened behind the scenes on your site.

✔ No audit events have been recorded in the last reporting period.

## SEO

### SEO Crawl Report

This SEO analysis picks up any issue Google may encounter crawling and indexing your website including accessibility checks and structural improvements.

9 SEO improvements available

#### ✔ Canonical

The canonical link tag is being used on your site. <http://wordpress-178098-517921.cloudwaysapps.com/> is set as the preferred URL for search results. Verify this is correct, as canonical tags are often hard-coded and may not always reflect the latest changes.

#### ✔ Favicons

#### ✔ Generator

Consider improving; you may want to obscure this info.  
WordPress 4.9.6

#### ! H1 Headings

An H1 tag is being used on this page.

- You can improve your H1 by adding more keywords from the page to your H1 header. This will help search engines find the most important content.  
Ready To Do This? Tell Us About Your Project

#### ! HTTPS

It doesn't appear your site is setup with an HTTPS URL for secure communication. Even if your site does not collect sensitive customer information, [Google is now using HTTPS as a ranking signal](#).

#### ! Image ALTs

Your webpage has 3 image tags, 1 of them do not contain the required "alt" attribute. Add the image description to help search engines understand your images better and provide a description when the image is not available.

- <http://wordpress-178098-517921.cloudwaysapps.com/wp-content/uploads/2016/09/bruno-white-1.png>

#### ✔ Meta Robots

#### ! Meta Description

The meta description is missing from this page. A good meta description will help boost your PageRank and attract more visitors.

#### ! Microdata

We did not find any microdata embedded on your page. Adding microdata will allow search engines to provide more relevant results from your site.

#### ! OpenGraph

We did not find OpenGraph information for your page. Adding OpenGraph information will improve how content from your site is displayed on social media.

#### ! Robots.txt

Good news! We located the robots.txt file and search engine crawlers have access to do their job. However, we haven't been able to find any sitemap information in it.

#### ✔ Sitemaps

A sitemap was not detected on this site. Create a sitemap to help search engines better share your content with others. Read more on building and [implementing sitemaps](#).

#### ✔ Title

✔ URL Structure: query vars

---

✔ URL Structure: underscores vs dashes

---

✔ URL Structure: capitalization

---

✔ URL Structure: hashes

---

! URL Structure: keywords

We could not detect any keywords in your URL. Having the right keywords in your URL can increase your search click-through rate.

---

! Anchor Tags

Empty anchors were found on your site. Make sure all of your links have descriptive anchor tags to improve accessibility.

- <http://wordpress-178098-517921.cloudwaysapps.com>
- 

✔ Redundant Anchor Titles

---

✔ Relative Anchors Pointing to Invalid IDs

---

✔ Uninformative Anchor Text

---

✔ Duplicate Element IDs

---

✔ List of ARIA Roles

---

✔ List of ARIA Landmarks

---

✔ Label Duplicate ARIA Landmarks

---

## Performance

Performance is critical to your site's success and key ranking factor for search engines. Consequently we are always assessing the speed at which your site loads, your uptime and what can be improved.

It's important to note that it's almost impossible to achieve a complete 100 score in all aspects of your site, but we're always working towards that regardless.

The report below illustrates how you are performing, and anything above 85 is excellent.

If there are any questions you have regarding this please just let us know.

### Performance Test Report

This report details your overall performance score benchmarked against Google PageSpeed. A score above 85 is generally recommended.

! Your website scored 81/100 on the last performance test.

! <b>Optimize images</b>	Resource	41/100
Properly formatting and compressing images can save many bytes of data.		
! <b>Eliminate render-blocking JavaScript and CSS in above-the-fold content</b>	Resources	63/100
Your page has 2 blocking script resources and 11 blocking CSS resources. This causes a delay in rendering your page.		
✓ <b>Leverage browser caching</b>	Resources	98/100
✓ <b>Minify JavaScript</b>	Resource	99/100
✓ <b>Minify CSS</b>	Resource	99/100
✓ <b>Prioritize visible content</b>	Content	100/100
✓ <b>Enable compression</b>	Server	100/100
✓ <b>Reduce server response time</b>	Server	100/100
✓ <b>Avoid landing page redirects</b>	Server	100/100
✓ <b>Minify HTML</b>	Content	100/100

## Browser Caching

Caching stores temporary data on your visitors devices so they don't have to download stuff twice if they don't have to. This results in a much faster second time round page load speed.

✔ Recommended cache settings are enabled for all file types.

File Type	Recommended Expiry	Current Expiry
Javascript	8 days	✔ 1 month
CSS	8 days	✔ 1 month
Media	8 days	✔ 1 month
Images	8 days	✔ 1 month

## GZIP Compression

Gzip compresses your HTML, Javascript, and Style Sheets before sending them over to the browser. This significantly reduces transfer time since the files are much smaller.

✔ Gzip is enabled for all recommended file types.

Compression Type	Status
Html	✔ Enabled
Javascript	✔ Enabled
CSS	✔ Enabled

## Backups

It's absolutely critical that your site is continually and securely backed up so should you run into any problems with your server, security or web development you have a complete and recent copy of your site ready to restore at the click of a button.

More information is below, if you have any questions please just let us know.

 Your website is not backed up!

<b>Last Backup</b>	None
<b>Last Backup Size</b>	N/A
<b>Schedule</b>	Not Scheduled

## Uptime

### Statistics

This report details how accessible your website's server has been over the period including any downtime and your average server response time.

 Your website had no downtime during the reporting period.

Availability	100%
Outages	0
Downtime	0s

### Response Time

This graph shows your server response time over the report period. A lower response time is better.
